

Pesticides, Herbicides, and Fertilizers

More frequent and lower dose applications of fertilizers will cause less pollution runoff.

Check with the Orange County Cooperative Extension Office for answers to your pest and weed problems. They may be able to suggest less toxic solutions. Their phone number is (407) 836-7570.

Did you know that when someone pours, blows, or sweeps anything into the street, it will eventually end up in one of the area's beautiful lakes? Many businesses and individuals discard wastewater, pollution, and debris onto the ground and into the storm drains that may cause lake pollution.

A storm drain is part of the stormwater system that collects rainwater from streets, parking lots and rooftops. In most cases, this polluted stormwater runoff drains directly into a lake through the underground storm sewer system.

We need your eyes on the street

Illicit Discharges

How You Can Help

Report any polluting material that you see being discharged into a street, alley, or storm drain. If you see a violation occurring, call the Orange County Environmental Protection Division at (407) 836-1400, and give us the location, time, and any other observations you may have witnessed.

Violations that are reported while they are in progress can often be corrected quickly, and may result in little

HOW YOU CAN HELP

Environmental Protection Division
800 Mercy Drive Suite 4
Orlando FL 32808
(407) 836-1400

Erosion and Sedimentation

Sediment is one of the greatest pollutants by volume entering our lakes and streams and is a product of uncontrolled erosion.

Why control sediment and erosion?

- ▶ Erosion and sedimentation result in loss of fertile topsoil,
- ▶ filling of lakes and streams,
- ▶ increased flooding,
- ▶ endangerment to plant and animal life,
- ▶ damage to streets and roads.
- ▶ Other pollutants such as pesticides, herbicides, and oil can become attached to eroded soils and enter lakes and streams along with the soil.

How can you help?

- ▶ Plant and maintain vegetation on bare and sloped areas.
- ▶ Route roof drainage to lawns, paved driveways, or collection barrels.
- ▶ Preserve existing vegetation

These measures will help curb erosion and sedimentation and will maintain the aesthetics and cleanliness of our lakes and streams.

The Law

The Federal Clean Water Act was established in 1972 to protect our waterways. This legislation was passed in response to growing public concern for serious and widespread water pollution. As a result, the National Pollutant Discharge Elimination System (NPDES) was developed, and our nations waterways have shown an increase in quality. Please participate with us in this work by finding ways that you can help.

Leaves and Grass Clippings

Leaves and grass clippings that are able to reach a lake through the storm drain system will decrease the amount of oxygen in the water as they decompose. Released nutrients can cause excessive algal growth which may result in a fish kill.

City street sweepers can barely keep up with the leaves that fall naturally. PLEASE don't add to the burden by raking or blowing leaves and grass into the street.

How can you help?

- ▶ Start a compost pile for leaves and other yard waste
- ▶ Invest in a mulching blade for your lawn mower
- ▶ If you have a lawn service, please be sure they comply with these guidelines.

Data collected has shown that grass clippings and leaves contain high concentrations of nitrogen and phosphorous which are the most common cause of urban lake pollution.

Sanitary Sewer Overflows

When grease or oil from restaurants and households is discharged to the county's sanitary sewer system it mixes with other wastes and becomes solidified. This creates a blockage in sewer pipes, preventing the sewage from flowing and causing it to overflow into streets, buildings, and lakes.

How can you help?

- ▶ Do Not put greasy food items down the drain or garbage disposal.
- ▶ Wipe dishes, pots and pans with a paper towel to remove excess grease before washing
- ▶ Clean grease spills with a rag or paper towel, and place grease in a container to solidify and throw away with the garbage
- ▶ Maintain septic systems regularly

The more each citizen does to protect the systems we have, the longer they will be here for our children, and the less they will cost to maintain.

Washing Vehicles

Vehicles washed on paved surfaces causes detergent filled water to run into the streets, the storm water system, and to retention ponds and lakes.

How can you help?

- ▶ Wash vehicles on unpaved areas
- ▶ Use environmentally friendly soap

HOUSEHOLD HAZARDOUS WASTES

Do NOT POUR oil or any chemicals down any drain or in the street. Dispose of them properly through the Household Hazardous Waste Facility (HHWF) at the Landfill.

What can You Bring to the HHWF?

- ▶ Banned and unwanted pesticides
- ▶ Oil based paints
- ▶ Paint thinner and stripper
- ▶ Varnishes and stains
- ▶ Household cleaning fluids
- ▶ Chemical drain cleaners
- ▶ Auto and furniture polish
- ▶ Solvents and flammable liquids
- ▶ Pool chemicals
- ▶ Photography chemicals
- ▶ Chemistry sets
- ▶ Brake fluid and antifreeze
- ▶ Unknown chemicals
- ▶ Household, vehicle, and boat batteries
- ▶ Waste oil

Where is the HHWF?

1. The Orange County Landfill
5901 Young Pine Road
(Off Dean and Curry Ford Road)
2. McLeod Road Transfer Station
5000 L. B. McLeod Road
(Between Bruton and Kirkman Road)

Questions about HHWF?

Call and ask to speak with the environmental staff at the landfill at (407) 836-6601.
